

ASAD L. ALI

Web Designer / Developer | UI/UX · Angular · React · Next.js · Laravel · .NET · AI-assisted development

(501) 817-1755 | asad.liaqat@outlook.com | Little Rock, AR | [linkedin.com/in/asad-ali-182910394](https://www.linkedin.com/in/asad-ali-182910394) | github.com/optimuswave386 | nextjs-redesign-with-stripe.vercel.app | html-react-and-gsap-version1.vercel.app | <https://angularapp-with-github-and-youtube-drab.vercel.app/>

PROFESSIONAL SUMMARY

Web designer/developer with a full-stack portfolio spanning Angular + .NET, React/Node/Express/MongoDB, Next.js with Stripe, and Laravel, backed by 10+ years in IT across development, QA and client-facing technical roles. Builds responsive, database-driven applications with user authentication and tested APIs, and uses AI tools (Claude, ChatGPT, Google AI) to speed up development. Applies UI/UX design, web standards and WCAG accessibility practices, building on a Digital Multimedia degree and early interactive-media roles. Associate's degree in Computer Information Systems (Cybersecurity); 15 certificates and training programs completed.

TECHNICAL SKILLS

Web development: Angular, React, Next.js, Node.js/Express, Laravel (Blade, Flowbite, Spatie Auth), ASP.NET/C#, Spring Boot, PHP, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, Material UI, WordPress, REST APIs

UI/UX & design: Figma, Adobe web image editing tools (earlier: Photoshop, Flash, Director), UI/UX design, responsive design, HTML/CSS web standards, accessibility (WCAG)

Databases: MySQL, SQL Server (Docker), PostgreSQL, MongoDB, Oracle; SQL queries, joins, stored procedures

Tools & platforms: Git/GitHub, Docker, Postman, Eclipse, VS Code, JIRA, Trello, Vercel, Google Cloud, Linux/Unix, macOS, Windows, Microsoft Office, Claude / ChatGPT / Google AI

Testing & data: manual and API testing (Postman); functional, regression and UAT testing (earlier QA career); Python (NumPy, Seaborn), Power BI, R, Excel

PROJECTS

MERN stack app and Next.js + Stripe store

[Demo](#) | [Live site](#) | [Code](#)

- Conceived and built a MERN prototype that pulls images from NASA's API, growing it from a basic web page into a React app backed by MongoDB; ported it to Next.js with multiple pages and deployed both sites on Vercel.
- Built REST APIs with Express middleware, user authentication and per-user data isolation; integrated Stripe to take online payments (working in local preview; live version in progress).

Laravel web application: admin, store and social profiles

[Demo](#) | [Code](#)

- Designed and built from my own concept: an admin section, an online store, and user profiles where members follow each other and publish posts.
- Created the API endpoints behind these features using Blade templating, custom JavaScript, Flowbite components, role-based access (Spatie Auth) and automated database seeding; tested endpoints in Postman.

Angular + .NET API webstore (tutorial-based, extended)

[Demo](#) | [Code](#)

- Followed a tutorial on the current Angular version, resolving version differences; replaced the sample API with my own .NET API backed by SQL Server in Docker, and modeled the shopping cart with custom TypeScript types.
- Checked the API's routed endpoints in a browser and in Postman, and tested the storefront and cart manually.

React + Spring Boot microservices with OAuth (course project)

[Demo](#) | [Code](#)

- Coded the full fitness-app course project by hand in Eclipse (instead of the course's IntelliJ IDEA) and fixed the resulting build errors through research.

PROFESSIONAL EXPERIENCE

Independent Web Designer / Developer — Upwork freelancer profile, Little Rock, AR

May 2019 – Present

Self-directed portfolio projects, alongside college (2021–2024)

- Build full-stack applications in Angular, React, Next.js, Node/Express, Laravel, PHP/MySQL, ASP.NET/C#, Java and Spring Boot, with responsive HTML5, CSS3 and Bootstrap interfaces and third-party API integrations such as NASA's image API.
- Design interfaces in Figma and Adobe's web image editing tools, applying UI/UX principles, HTML/CSS web standards and WCAG accessibility guidelines to portfolio projects.
- Design MySQL databases (queries, stored procedures, data validation), use Git for source control, and troubleshoot front-end, back-end and database issues; test applications manually and API endpoints in Postman.

Sales Assistant — Industrial Innovation Group (incl. TrustCor Consulting), Sharjah, UAE Nov 2013 – Apr 2019 (full- and part-time)

- Contributed to the design, development, testing and troubleshooting of two mobile applications (Android and iOS) while in pre-sales.
- Acted as technical liaison between sales and product development; on a project for a government-related customer, met the customer on site, documented requirements and helped prepare the product specifications.
- Helped build and maintain a regional supplier spreadsheet that sped up procurement and vendor responses.

Technical Support Engineer — Spectrum Networks – Middle East, Dubai, UAE Sep 2011 – Dec 2012

- Supported networking equipment and endpoint security products for government and private-sector customers; diagnosed and resolved connectivity, hardware, software and security issues on site, by phone and by email, escalating complex cases and logging resolutions.

Web and Systems Engineer — Methaq Takaful Insurance Company, Dubai, UAE Apr 2009 – Dec 2010

- Developed and maintained web applications in PHP/MySQL and ASP.NET/C# with SQL Server and provided production support; designed a new-business dashboard and configured the Premia (3i Infotech) core insurance system for product setups.

Quality Assurance Analyst — Plymouth Rock Assurance Corporation, Boston, MA May 2007 – Feb 2009

- Designed and executed manual and automated test cases for enterprise insurance applications; ran functional, regression, integration, system and user acceptance tests, documented defects and validated data against business rules.

Programmer/Analyst — Enterprise Business Solutions Inc., Falls Church, VA Aug 2005 – May 2007

- Wrote, tested and maintained code for enterprise insurance applications, debugged defects, supported UAT, and automated regression tests with Mercury WinRunner and IBM Rational Robot. Used Fiserv insurance client/server applications.

Interactive Multimedia Developer — OtterBase, Kalamazoo, MI Jan 2005 – Jul 2005 (full- and part-time)

- Designed and built CD-ROM interactive multimedia applications and interfaces with Adobe Flash, Director and Photoshop, following UI/UX principles and web accessibility standards (WCAG), and tested them for usability across systems.

Student Web Developer — Andrews University, Berrien Springs, MI Part-time, about 2 years between 2001 and 2004

- Built multimedia applications on Apple computers using Adobe software while earning my Digital Multimedia degree; this is where I first learned UI/UX design, web standards and WCAG accessibility guidelines.

EDUCATION & CERTIFICATIONS

Associate of Applied Science, Cybersecurity (Computer Information Systems) — University of Arkansas, Pulaski Technical College, Little Rock, AR

Jan 2023 – Dec 2024

Bachelor of Technology, Digital Multimedia — Andrews University, College of Technology, Berrien Springs, MI Aug 2001 – Dec 2004

Computer Science coursework (transfer credits) | Final project: designed and built a website for graduation

freeCodeCamp: Responsive Web Design, JavaScript, Relational Database (2026) | **Google Career Certificates (Coursera):** IT Automation with Python (Jan 2025), Data Analytics (Sep 2024), Advanced Data Analytics (Sep 2025), Business Intelligence (May 2025), Project Management (Apr 2025), Cybersecurity (Aug 2024) | **Other:** Cisco Networking Academy CCNAv7, three courses (2023–2024) | NDG Linux Essentials, Introduction to Linux I and II (2023) | Arkansas ReSkill Program (2024–2025)
